LaTeX-Beamer-Theme der TU Dortmund

A nice template for presentations of ie[3] institute

Univ.-Prof. Dr. rer. hort. Klaus-Dieter Brokkoli

12. Februar 2021

How to use

Props to contributors Maximilian Nöthe and Bernhard Dick for the ground-laying work on this theme!

To install this theme on your system, at least `beamerthemetudo.sty` and the provided directory `logos` have to be in a place, where LaTeX is able to find those packages. This is one of either:

- `TEXMFHOME/tex/latex/tudobeamertheme`. You may find the location of `TEXMFHOME` with `kpsewhich --var-value TEXMFHOME`, typically it's at `$HOME/texmf`.
- The same directory, your document to compile is in.
- Any other place, that is added to `TEXINPUTS`.

You may install the template with this single line command:

```
$ cd `kpsewhich --var-value TEXMFHOME` && git clone https://github.com/ie3-institute/tudobeamertheme
```

Additional information about LaTeX and Beamer may be found at:

- Extensive LaTeX course by PeP et Al.
  http://toolbox.pep-dortmund.org/notes
- LaTeX-Beamer documentation:
  http://www.ctan.org/pkg/beamer

Additional Features

There are two options available to alter the appearance of your slides:

If you place `logos/chair.pdf` in one of the above mentioned places, the abbreviation of your chair is replaced by this logo.

If you place `images/tudo-title-1.jpg` to `images/tudo-title-4.jpg` in one of the above mentioned places, the first, thrid, fifth and seventh box on the title page will be replaced by this picture.

Fonts

As of Coporate Design of TU Dortmund university, „Akkurat Office" is the foreseen font to use.
If that one isn't available, alternatively „Fira Sans" is used. So make sure, you have at least one of both installed.
For mathematical typesetting, „Fira Math" is the font of choice, if you compile using `xelatex` or `lualatex`.
